TECHNICAL REGULATIONS  
VOLUME III  
PART 19  
SAFETY MANAGEMENT**

**18 July 2024**

## DOCUMENT CHANGE RECORD

The following table records the complete history of the successive editions of the present document.

| Version | Date                           | Reason for Change       | Pages Affected |
|---------|--------------------------------|-------------------------|----------------|
| 1       | 27 <sup>th</sup> July 2015     | First draft for comment | All            |
| 1       | 11 <sup>th</sup> November 2015 | Final Draft             | All            |
| 1       | 03 <sup>rd</sup> January 2016  | Released Issue          | All            |
| 2       | 6 <sup>th</sup> April 2016     | NPA Version 2           | All            |
| 2       | 21 <sup>st</sup> June 2016     | Release of Version 2    | All            |
| 2       | 3 <sup>rd</sup> January 2017   | Change logo             | Cover          |
|         | 18 July 2024                   | Change Logo             | Cover          |
|         |                                |                         |                |
|         |                                |                         |                |
|         |                                |                         |                |
|         |                                |                         |                |

### RECORD OF AMENDMENTS

| <b>Number</b> | <b>Date Applicable</b> | <b>Date Entered</b> | <b>Entered by (Name)</b> |
|---------------|------------------------|---------------------|--------------------------|
| 2.1           | 3/1/2017               | 3/1/2017            | P. Kelly                 |
|               |                        |                     |                          |
|               |                        |                     |                          |
|               |                        |                     |                          |
|               |                        |                     |                          |
|               |                        |                     |                          |
|               |                        |                     |                          |
|               |                        |                     |                          |
|               |                        |                     |                          |
|               |                        |                     |                          |
|               |                        |                     |                          |

## FORWARD

In accordance with Law No.14 of 2013 with respect to the issuance of the Civil Aviation Law, Annex 19 to Chicago Convention (1944)<sup>1</sup> and other international obligations, the Civil Aviation Affairs of the Kingdom of Bahrain (CAA) is promulgating regulations which promote safety. The ICAO Council, on 13 April 1948, adopted a resolution inviting the attention of Contracting States to the desirability of using in their own national regulations, as far as is practicable, the precise language of those ICAO Standards that are of a regulatory character and also of indicating departures from the Standards, including any additional national regulations that are important for the safety or regularity of air navigation.

Therefore, the Regulation at hand reproduces the intent of ICAO Annex 19 “Safety management” unchanged wherever possible and adapts it to the needs of the Kingdom of Bahrain wherever necessary.

The text does not take into account any (existing or planned) difference applicable in the Kingdom of Bahrain. According to Article 38 of the Chicago Convention, the Kingdom of Bahrain is obliged to communicate any difference between their national regulations and practices and the related ICAO Standards and Recommended Practices to ICAO and to publish in the AIP.

Any reference in the text to ICAO documents may be substituted by a reference to any existing CAA document (Manual, Instruction, Handbook) covering the same matters.

Hereinafter, wherever a reference is made to an ICAO Annex followed by a number, it shall refer to the Annex to the Chicago Convention (1944) corresponding to that number.

---

<sup>1</sup> Hereinafter: ICAO Annex 19.

## Remarks

To avoid any misunderstanding within this document:

1. The words 'shall' and 'must' indicate that compliance is compulsory.
2. The word 'should' indicates a recommendation. It does not mean that the compliance is optional but rather that, where insurmountable difficulties exist, the BCAR may accept an alternative means of compliance, and provided that an acceptable safety assurance from the authority shows that the safety requirements will not be reduced below that intended by the requirement.
3. The word 'can' or 'may' is used in a permissive sense to state authority or permission to do the act prescribed.
4. The word 'will' is used to express the future.
5. The "Notes" contained in the ICAO Annex 19 have not been included into the regulatory part of this Part. They have no regulatory function and, therefore, they may form a part of the handbooks, manuals etc. to Part 19 only.
6. This Part shall be used taking into account the Procedures for Air Navigation Services - Air Traffic Management (ICAO Doc 4444, PANS-ATM) and the Regional Supplementary Procedures - Rules of the Air and Air Traffic Services, contained in ICAO Doc 7030.

## **ABBREVIATIONS (USED IN THIS REGULATION)**

***ALoSP - Acceptable Level of Safety Performance***

***ASSD – Aviation Safety and Security Directorate***

***ATS - Air Traffic Services***

***CAA - Civil Aviation Affairs***

***CNS - Communications, Navigation and Surveillance***

***CVR - Cockpit Voice Recorder***

***MTT - Ministry of Transportation and Telecommunication***

***MET - Meteorological Services***

***PANS - Procedures for Air Navigation Services***

***SAR – SEARCH AND RESCUE***

***SARPs - Standards and Recommended Practices***

***SDCPS - Safety Data Collection and Processing Systems***

***SMM - Safety Management Manual***

***SMP - Safety Management Panel***

***SMS - Safety Management System***

***SPI – Safety Performance Indicator***

***SSP - State Safety Programme***

## **PUBLICATIONS (Referred to in this Regulation)**

Convention on International Civil Aviation (Doc 7300)

Annexes to the Convention on International Civil Aviation:

Annex 1 — Personnel Licensing

Annex 6 — Operation of Aircraft

Part I — International Commercial Air Transport — Aeroplanes

Part II — International General Aviation — Aeroplanes

Part III — International Operations — Helicopters

Annex 8 — Airworthiness of Aircraft

Annex 11 — Air Traffic Services

Annex 13 — Aircraft Accident and Incident Investigation

Annex 14 — Aerodromes

Volume I — Aerodrome Design and Operations

Procedures for Air Navigation Services:

ABC — ICAO Abbreviations and Codes (Doc 8400)

ATM — Air Traffic Management (Doc 4444)

Annex 19 --- Safety Management

## MANUALS

Airworthiness Manual (Doc 9760)

Manual of Civil Aviation Medicine (Doc 8984)

Manual of Procedures for Establishment and Management of a State's Personnel Licensing System (Doc 9379)

Manual of Procedures for Operations Inspection, Certification and Continued Surveillance (Doc 8335)

Manual on Certification of Aerodromes (Doc 9774)

Manual on the Approval of Training Organizations (Doc 9841)

Safety Management Manual (SMM) (Doc 9859)

Safety Oversight Manual (Doc 9734) Part A — The Establishment and Management of a State's Safety Oversight System

## CHAPTER 1 - DEFINITIONS

When the following terms are used in this Regulation, they have the following meanings:

**ALoSP:** The minimum level of safety performance of civil aviation in a State, as defined in its State safety programme, or of an organisation, as defined in its Safety Management System, expressed in terms of Safety Performance Targets and Safety Performance Indicators.

**Accident:** An occurrence associated with the operation of an aircraft which, in the case of a manned aircraft, takes place between the time any person boards the aircraft with the intention of flight until such time as all such persons have disembarked, or in the case of an unmanned aircraft, takes place between the time the aircraft is ready to move with the purpose of flight until such time as it comes to rest at the end of the flight and the primary propulsion system is shut down, in which:

a) a person is fatally or seriously injured as a result of:

— being in the aircraft, or

— direct contact with any part of the aircraft, including parts which have become detached from the aircraft, or

— direct exposure to jet blast,

*except* when the injuries are from natural causes, self-inflicted or inflicted by other persons, or when the injuries are to stowaways hiding outside the areas normally available to the passengers and crew; or

b) the aircraft sustains damage or structural failure which:

— Adversely affects the structural strength, performance or flight characteristics of the aircraft, and

— would normally require major repair or replacement of the affected component,

*except* for engine failure or damage, when the damage is limited to a single engine, (including its cowlings or accessories), to propellers, wing tips, antennas, probes, vanes, tires, brakes, wheels, fairings, panels, landing gear doors, windscreens, the aircraft skin (such as small dents or puncture holes), or for minor damages to main rotor

blades, tail rotor blades, landing gear, and those resulting from hail or bird strike (including holes in the radome); or

c) the aircraft is missing or is completely inaccessible.

**Aeroplane:** A power-driven heavier-than-air aircraft, deriving its lift in flight chiefly from aerodynamic reactions on surfaces which remain fixed under given conditions of flight.

**Aircraft:** Any machine that can derive support in the atmosphere from the reactions of the air other than the reactions of the air against the earth's surface.

**Alert Level:** An established level or criteria value outside of the normal operating range or out-of-control region that triggers a warning that an adjustment or evaluation is needed.

**Consequence:** Actual or potential impact of a hazard that can be expressed qualitatively and/or quantitatively. More than one consequence may evolve from an event.

**Corrective Action:** Action to eliminate the cause of or reduce the effects of a detected hazard or potentially hazardous situation in order to prevent its recurrence.

**Defences:** Specific mitigating actions, preventive controls or recovery measures put in place to prevent the realization of a hazard or its escalation into an undesirable consequence.

**Error:** An action or inaction by an operational person that leads to deviations from organisational or the operational person's intention.

**Hazard:** A condition that could cause or contribute to an aircraft incident or accident.

**Hazard Analysis:** Analysis performed to identify hazards, hazard effects, and hazard causal factors used to determine system risk.

**Hazard Identification:** A process to establish a list of hazards relevant to the activity and the causes/threats that could release them.

**Helicopter:** A heavier-than-air aircraft supported in flight chiefly by the reactions of the air on one or more power-driven rotors on substantially vertical axes. The term "rotorcraft" may be used as an alternative to "helicopter".

**High-consequence Indicators:** Safety Performance Indicators pertaining to the monitoring and measurement of high-consequence occurrences, such as accidents or serious incidents. High-consequence indicators are sometimes referred to as reactive indicators.

**Human Factors:** Principles which apply to aeronautical design, certification, training, operations and maintenance and which seek safe interface between the human and other system components by proper consideration to human performance.

**Incident:** An occurrence, other than an accident, associated with the operation of an aircraft which affects or could affect the safety of operation.

**Investigation:** A process conducted for the purpose of accident prevention which includes the gathering and analysis of information, the drawing of conclusions, including the determination of causes and, when appropriate, the making of safety recommendations.

**Lower-consequence Indicator:** Safety Performance Indicators pertaining to the monitoring and measurement of lower-consequence occurrences, events or activities such as incidents, non-conformance findings or deviations. Lower-consequence indicators are sometimes referred to as proactive/predictive indicators.

**Open Reporting Culture:** An organisational perspective that actively encourages effective safety reporting by defining acceptable behaviour (often unintended errors) and unacceptable behaviour (recklessness, violations or sabotage), and provides fair protection to reporters.

**Operational personnel.** Personnel involved in aviation activities who are in a position to report safety information.

*Note.— Such personnel include, but are not limited to: flight crews; air traffic controllers; aeronautical station operators; maintenance technicians; personnel of aircraft design and manufacturing organizations; cabin crews; flight dispatchers, apron personnel and ground handling personnel.*

**Predictive:** Any method that continuously analyses current and historical information to forecast potential future occurrences.

**Prescriptive Standards:** Standards that specify methods for complying with safety requirements.

**Preventive Action:** Pre-emptive action to eliminate or mitigate the potential cause or reduce the future consequence of a hazard.

**Proactive:** Any method that actively searches for potential safety risks through the analysis of an organisation's activities prior to occurrence.

**Reactive:** Any method that responds to past occurrences.

**Risk:** The assessed predicted likelihood and severity of the consequence(s) or outcome(s) of a hazard.

**Risk Analysis:** Process whereby possible consequences of hazards are objectively characterized for their severity and probability. The process can be qualitative and/or quantitative.

**Risk Assessment:** The identification, evaluation, and estimation of the level of risk.

**Risk Control:** Activities that ensure that safety policies, procedures, and processes minimize the risk of an aviation accident or incident.

**Risk Management:** An organisational function that assesses the organisation's system and verifies that the system adequately controls risk. A formal risk management process describes a system, assesses hazards, analyses those hazards to evaluate the risk, and establishes controls to manage those risks.

**Risk Mitigation:** The process of incorporating defences or preventive controls to lower the severity and/or likelihood of a hazard's projected consequence.

**Safety:** The state in which risks associated with aviation activities, related to, or in direct support of the operation of aircraft, are reduced and controlled to an acceptable level.

**Safety Assessment:** Documentation that contains hazard descriptions, the related consequences, the assessed likelihood and severity of the safety risks, and required safety risk controls.

**Safety Assurance:** Processes used to ensure risk controls developed under the risk management process achieve their intended objectives throughout the life cycle of a system. This process may also reveal hazards not previously identified and identify or assess the need for new risk control, as well as the need to eliminate or modify existing controls. This is one of the four components of SMS.

**Safety Culture:** An enduring set of values, norms, attitudes, and practices within an organisation concerned with minimizing exposure of the workforce and the general public to dangerous or hazardous conditions. In a positive safety culture, a shared concern for, commitment to, and accountability for safety is promoted.

**Safety management system (SMS):** A systematic approach to managing safety, including the necessary organizational structures, accountabilities, policies and procedures.

**Safety performance:** A State or a service provider's safety achievement as defined by its safety performance targets and safety performance indicators.

**Safety performance indicator:** A data-based parameter used for monitoring and assessing safety performance.

**Safety performance target:** The planned or intended objective for safety performance indicator(s) over a given period.

**Safety Promotion:** A combination of safety culture, training, and information sharing activities that support the implementation and operation of an SMS in an organisation. This is one of the four components of SMS.

**Safety risk:** The predicted probability and severity of the consequences or outcomes of a hazard.

**Safety Risk Management:** A process used to assess system design and verify that the system adequately controls risk. A formal risk management process describes a system, assesses hazards, analyses those hazards to evaluate the risk, and establishes controls to manage those risks. This is one of the four components of SMS.

**Severity:** The extent of loss or harm associated with consequences of a hazard.

**Severity –Catastrophic:** Results in multiple fatalities and/or loss of the aircraft.

**Severity –Hazardous:** A large reduction in safety margins, physical distress, or workload such that organisations cannot be relied upon to perform their tasks accurately or completely. Serious injury or death to a small number of aircraft occupants, ground personnel, and/or general public. Major equipment damage.

**Severity –Major:** A significant reduction in safety margins and a reduction in the ability of organisations to cope with adverse operating conditions as a result of an increase in workload, significant discomfort, or conditions impairing their efficiency. Serious incident with physical distress to occupants of aircraft, injuries, and equipment damage.

**Severity –Minor:** Does not significantly reduce system safety and operator actions are well within their capabilities. May include slight reduction in safety margins, operating limitations, slight increase in workload, some physical discomfort, and/or minor equipment damage.

**Severity –Negligible:** Little consequence. Has no effect on safety.

**Serious injury:** An injury which is sustained by a person in an accident and which:

- a) Requires hospitalization for more than 48 hours, commencing within seven days from the date the injury was received; or
- b) results in a fracture of any bone (except simple fractures of fingers, toes or nose); or
- c) involves lacerations which cause severe haemorrhage, nerve, muscle or tendon damage; or
- d) involves injury to any internal organ; or
- e) involves second or third degree burns, or any burns affecting more than 5 per cent of the body surface; or
- f) involves verified exposure to infectious substances or injurious radiation.

**State of Design:** The State having jurisdiction over the organization responsible for the type design.

**State of Manufacture:** The State having jurisdiction over the organization responsible for the final assembly of the aircraft.

**State of the Operator:** The State in which the operator's principal place of business is located or, if there is no such place of business, the operator's permanent residence.

**State safety programme (SSP):** An integrated set of regulations and activities aimed at improving safety

## CHAPTER 2 – APPLICABILITY

2.1 This Regulation shall be applicable to safety management functions related to, or in direct support of, the safe operation of aircraft within the territory of the Kingdom of Bahrain, and the airspace delegated to it. This regulation establishes the Safety Management System (SMS) requirements for organisations approved/ certified in accordance with:

2.1.1 CAR001/CAO001 and

2.1.2 CAR002/CAO002 and

2.1.3 CAR003/CAO003 and

2.1.4 CAR004/CAO004 and

2.1.5 CAR005/CAO005 and

2.1.6 CAR006/CAO006 and

2.1.7 CAR007/CAO007 and

2.1.8 any other Regulation, Order, Directive or Instruction issued for aviation related activities that require an SMS.

2.2 Additionally, each of the following service providers shall implement an SMS:

2.2.1 approved training organisations that are exposed to safety risks related to aircraft operations during the provision of their services; and

2.2.2 operators of aeroplanes or helicopters authorized to conduct international commercial air transport; and

2.2.3 organisations or individuals that provide services to entities described in 2.2.2, unless the operator includes, and the BCAA accepts, those organisations within the scope of the operator's SMS; and

2.2.4 approved maintenance organizations providing services to operators of aeroplanes or helicopters engaged in international commercial air transport, excepting whence maintenance activities are conducted by other than an approved maintenance organization they shall be included in the scope of the operator's SMS; and

2.2.5 organisations responsible for the type design or manufacture of aircraft, in accordance with Annex 8 to the Chicago Convention; and

2.2.6 organisations that are handling agents or certified as shipping agents for transport of dangerous goods by air.

2.3 The SMS shall correspond to the size of the organisation and the nature and complexity of its activities, taking into account the hazards and associated risks inherent in these activities, and shall be acceptable to the BCAA.

2.4 Where the term “periodic”, or “periodically” is used, the organisation shall define the time frame within its manuals.

2.5 The operator of an airport certified for international civil operations shall ensure all entities providing services at that airport, excepting airlines which do not provide ground handling services, implement or are included in an SMS that is acceptable to the Accountable Manager of the operator.

2.6 All entities providing services at an airport certified for international civil operations shall comply with the airport operator’s requests relating to 2.5, to the satisfaction of the BCAA.

## **CHAPTER 3 - FRAMEWORK FOR SMS**

This section specifies the framework for the implementation and maintenance of a SMS which shall be met by the applicable organisations and accepted by the BCAA. The framework comprises six components and twelve elements as the minimum requirements for SMS implementation. These components shall be verified by the BCAA for adequacy and, upon availability of sufficient data, for effectiveness.

### **3.1 SAFETY POLICY AND OBJECTIVES**

Safety policy outlines the principles, processes and methods of the organisation's SMS to achieve the desired safety outcomes. The policy establishes continually improve safety in all aspects of its activities. Senior management develops measureable and attainable organisation wide safety objectives to be achieved.

#### **3.1.1 Management Commitment and responsibilities**

The organisation shall define its safety policy which shall:

- (a) reflect organisational commitment regarding safety; and
- (b) include a clear statement about the provision of the necessary resources for the implementation of the safety policy and achievement of the safety objectives; and
- (c) establish a non-punitive approach which supports safety reporting and encourages an open reporting culture for the purpose of safety improvement, not to apportion blame; and
- (d) clearly indicate that cases of gross negligence, wilful misconduct or a significant continuing safety concern are unacceptable in relation to the organisation's aviation activities and include the circumstances under which disciplinary action would or would not be applicable within the framework of the Safety Management System; and
- (e) be signed by the Accountable Manager; and
- (f) be communicated, with visible endorsement throughout the organisation; and
- (g) be periodically reviewed to ensure it remains relevant and appropriate to the organisation.

### **3.1.2 Safety accountabilities**

The organisation shall:

(a) identify the Accountable Manager who has full control of the resources, final authority over operations under the certificate/approval of the organisation and ultimate responsibility and accountability for the establishment, implementation and maintenance of the SMS; safety policies and the resolution of all safety issues; and

(b) clearly define lines of safety accountability throughout the organisation, including a direct accountability for safety on the part of senior management; and

(c) identify the accountabilities of all members of management, irrespective of other functions, as well as of employees, with respect to the safety performance of the SMS; and

(d) document and communicate safety responsibilities, accountabilities and authorities throughout the organisation; and

(e) define the levels of management with authority to make decisions regarding safety risk tolerability.

### **3.1.3 Appointment of key safety personnel**

#### **3.1.3.1 Post Holder SMS:**

The organisation shall appoint a properly educated, trained and experienced person who fulfils the role of Post Holder SMS for the development and maintenance of an effective Safety Management System.

The appointed person shall have direct access to the Accountable Manager to ensure that the Accountable Manager is kept properly informed on safety matters. The Post Holder SMS shall be acceptable to the BCAA.

The Post Holder SMS is a senior management position and shall not hold other positions that may conflict or impair his role as Post Holder SMS unless specifically approved by the BCAA.

### **3.1.4 Coordination of emergency response planning**

The organisation shall ensure that the Emergency Response Plan (ERP) is properly coordinated with the Emergency Response Plans of those organisations it must interface with during the provision of its services.

### **3.1.5 SMS Documentation**

(a) The organisation shall develop an SMS Manual endorsed by the Accountable Manager and acceptable to the BCAA to demonstrate how the organisation will comply with this PART.

(b) The organisation shall establish a system of record keeping that allows adequate storage and reliable traceability of all records related to Safety Management System processes.

## **3.2 SAFETY RISK MANAGEMENT**

Safety risk management shall include hazard identification, safety risk assessment and mitigation processes.

### **3.2.1 Hazard Identification**

The organisation shall develop, implement and maintain a process that ensures that hazards associated with its aviation products or services are identified. In order to ensure continuity of data flow through internal safety reporting systems, the organisation shall ensure that it effectively implements 3.1.1 (c).

In addition to the proactive and reactive methods of safety data collection the organisation should employ, where practical, predictive methodologies which could arrest risks from potential hazards.

### **3.2.2 Safety Risk Assessment and Mitigations**

The organisation shall develop, implement and maintain a process that ensures analysis, assessment, and acceptable control of the safety risks associated with identified hazards.

## **3.3 SAFETY ASSURANCE**

The organisation shall develop, document and maintain safety assurance processes to ensure that the safety risks controls established as a consequence of the hazard identification and risk management activities achieve their intended objectives.

### **3.3.1 Safety Performance Monitoring and Measurement**

In order for the organisation to verify its safety performance and to validate the effectiveness of safety risk controls, the organisation shall establish safety performance monitoring and measurement processes. Establishing Safety Performance Indicators (SPI) and Safety Performance Targets (SPT) of the SMS are two of the outcomes of the safety performance

monitoring and measurement processes. Such indicators and targets shall be agreed with the BCAA.

For organisations that do not have sufficient data for the establishment of SPTs, the organisation shall establish safety initiatives aiming at continuous improvement in relation to safety standards. These initiatives shall be in line with the safety objectives of the organisation.

### **3.4 Management of Change**

The organisation shall develop, document, implement and maintain a process to identify changes which may affect the level of safety risk associated with its aviation products or services and to identify and manage the safety risks or hazards that may arise from those changes.

### **3.5 Continuous Improvement of the SMS**

The organisation shall monitor and assess the effectiveness of its SMS processes to enable continuous improvement of the SMS.

## **3.6 SAFETY PROMOTION**

### **3.6.1 Training and education**

(a) The organisation shall develop and maintain a safety training programme that ensures that personnel are trained and competent to perform their duties relevant to the organisation's SMS.

(b) The scope of the safety training shall be appropriate to the individual's involvement in the SMS.

### **3.6.2 Safety Communication**

The organisation shall develop, document, implement and maintain formal means for safety communication that:

(a) ensures personnel are aware of the SMS to a degree commensurate with their positions in a timely manner; and

(b) conveys safety-critical information in a timely manner; and

(c) explains why particular safety actions are taken; and

(d) explains why safety procedures are introduced or changed.

## **APPENDIX 1: Guidance Material (GM) and Acceptable Means of Compliance (AMC)**

### **GM to Chapter 3 FRAMEWORK FOR SMS**

As the establishment of the Safety Management System requires time, new organisations and organisations that are transitioning from traditional safety programme to an integrated SMS should follow a phased approach. APPENDIX 6 provides an example of how a phased approach towards SMS implementation may be established for organisations not having SMS. While sequencing the establishment of the different elements is left to the organisation, the BCAA expects elements mentioned under Phase 1 to be provided at the time of application.

Upon completion of the phases, the BCAA will check the SMS for effectiveness.

#### **GM to 3.1.1(b) Management Commitment and responsibilities**

Safety objectives identify what the organisation intends to achieve in terms of safety management. The safety objectives are expressed as a top-level statement describing the organisation's commitment achieving safety. The safety objectives are linked with the Safety Performance Indicators, targets and mitigation plans. (For more guidance see also APPENDIX 7 –Safety Performance Indicators).

#### **GM to 3.1.1(c) Management Commitment and responsibilities**

Just and Safety culture concept is explained in APPENDIX 2.

#### **AMC 1 to 3.1.2(a) Safety accountabilities**

The Accountable Manager's authorities and accountabilities should include, but are not limited to:

- (a) communication and promotion of the safety policy;
  - (b) establishment of the organisation's safety objectives and safety
  - (c) establishment, implementation and maintenance of the organisation's competence to from the analysis of data collected through its safety reporting system and others Safety Data Collection and Processes Systems (SDCPS) in place; and
  - (d) establishment of a just culture which encourages safety reporting.
- (See APPENDIX 2).

#### **AMC 2 to 3.1.2(a) Safety accountabilities**

Depending on the size, structure and complexity of the organisation, the Accountable Manager should be:

- (a) the chief executive officer (CEO) of the Organisation; or equivalent;
- (b) the chairperson of the board of directors;
- (c) A person holding an appropriate delegation by a legally authorised person to act as an Accountable Manager
- (d) a partner; or
- (e) the proprietor.

#### **AMC to 3.1.3.1 Post Holder SMS**

The Post Holder SMS functions should include but are not limited to:

- (a) managing the SMS implementation;
- (b) performing/facilitating hazard identification and safety risk analysis;
- (c) monitoring corrective actions and evaluating their results;
- (d) providing periodic reports on the organisation's safety performance;
- (e) maintaining records and safety documentation;
- (f) planning and facilitating staff safety training;
- (g) providing independent advice on safety matters;
- (h) monitoring safety concerns in the aviation industry and their perceived impact on the organisation's operations aimed at service delivery;
- (i) managing that processes for SDCPS such as safety reporting, Flight Data Monitoring (FDM) and other safety data collection methods are established, and ensuring that they are implemented; and
- (j) advising the Safety Review Board on safety issues, in case the organisation has established such a board.

#### **GM to AMC to 3.1.3.1 (j) Post Holder SMS**

Depending on size, complexity and nature the organisation may need to establish a Safety Review Board (SRB) which is a high level committee that considers matters of strategic safety importance in support of the Accountable Manager's safety accountability.

The SRB provides the platform to achieve the objectives of resource allocation and to assess the effectiveness and efficiency of risk mitigation strategies. The SRB is chaired by the

Accountable Manager and composed of senior managers, including line managers responsible for functional areas as well as those from relevant administrative departments. The Post Holder SMS participates in the SRB in an advisory capacity. The SRB meets periodically.

The SRB:

- (a) monitors the effectiveness of the SMS;
- (b) monitors that any necessary corrective action is taken in a timely manner;
- (c) monitors safety performance against the organisation's safety policy and objectives;
- (d) monitors the effectiveness of the organisation's safety management processes and the declared corporate priority of safety management as another core business process;
- (e) monitors the effectiveness of the safety supervision of subordinate or sub-contracted operations;
- (f) ensures that appropriate resources are allocated to achieve safety performance beyond that required by regulatory compliance.

The SRB is strategic and deals with high-level issues related to policies, resource allocation and organisational performance monitoring. Once a strategic direction has been developed by the SRB, implementation of safety strategies should be coordinated throughout the organisation. This can be accomplished by creating a Safety Action Group (SAG). SAGs are composed of line managers and front-line personnel and are normally chaired by a designated line manager.

#### **GM 1 to 3.1.3.1 Post Holder SMS**

Below are examples of which may be considered to meet the proper education, training and experience requirement:

- (a) safety/quality management experience;
- (b) operational experience;
- (c) technical background to understand the systems that support operations;
- (d) people skills;
- (e) analytical and problem-solving skills;
- (f) project management skills; and
- (g) oral and written communications skills.

#### **GM 2 to 3.1.3.1 Post Holder SMS**

Organisations may establish a Safety Action Group to achieve the established performance, which reports to and takes strategic direction from the SRB.

(a) A Safety Action Group may be established as a standing group or as an ad hoc group to assist the Post Holder SMS or Safety Review Board.

(b) More than one Safety Action Group may be established depending on the scope of the task and specific expertise required.

(c) The Safety Action Group should report to, and take strategic direction from the Safety Review Board.

(d) The Safety Action Group may, assist the Post Holder SMS in:

1) oversee operational safety performance within the functional areas of the organisation and ensures that appropriate safety risk management activities are carried out with staff involvement as necessary to build up safety awareness;

2) coordinate the resolution of mitigation strategies for the identified consequences of hazards and ensures that satisfactory arrangements exist for safety data capture and employee feedback;

3) assess the safety impact related to the introduction of operational changes or new technologies;

4) coordinate the implementation of corrective action plans and ensures that corrective action is taken in a timely manner;

5) oversee safety promotion activities as necessary to increase awareness of safety issues among relevant employees, to ensure that employees are provided appropriate opportunities to participate in safety management activities.

(e) The Safety Action Group may also be tasked with the review the effectiveness of previous safety actions and safety promotion.

(f) The Post Holder SMS may also be included in the SAG.

#### **[AMC to 3.1.4 Coordination of emergency response planning](#)**

The ERP should be documented in the format of a manual or directly integrated into the SMS Manual and reflect the size, nature and complexity of the activities performed by the organisation. If the Emergency Response Plan is documented in a separate document, it should be cross-linked to SMS manual.

The ERP should also:

(a) ensure an orderly, safe and efficient transition from normal to emergency operations, and back to normal;

- (b) ensure delegation of emergency authority;
- (c) ensure authorisation by key personnel for actions contained in the plan;
- (d) ensure coordination of efforts to cope with the emergency;
- (e) ensure that the responsibilities, roles and actions of various agencies and personnel involved in dealing with emergencies are defined and personnel trained;
- (f) periodically be tested for the adequacy of the plan and the results reviewed to improve its effectiveness.
- (g) take into account considerations such as:
  - 1) governing policies;
  - 2) organisation;
  - 3) notifications;
  - 4) initial response;
  - 5) additional assistance;
  - 6) Crisis Management Centre (CMC);
  - 7) records;
  - 8) accident site;
  - 9) news media;
  - 10) formal investigations;
  - 11) family assistance;
  - 12) post-critical incident stress counselling; and
  - 13) post-occurrence review.

#### **[GM to 3.1.4 Coordination of emergency response planning](#)**

The Emergency Response Plan addresses possible or likely emergency/crisis scenarios relating to the organization's aviation product or service deliveries.

#### **[GM to AMC 3.1.4 Coordination of emergency response planning](#)**

APPENDIX 5 provides guidelines for typical contents of an ERP manual.

#### **[AMC to 3.1.5\(a\) SMS Documentation](#)**

An SMS manual defines the organisation's approach to the management of safety in a manner that meets the organisation's safety policy and the requirements of this PART. The organization should develop and maintain SMS documentation that describes how the organisation is going to comply with this regulation, and describes its

- (a) safety policy and objectives;
- (b) SMS requirements;
- (c) SMS processes and procedures;
- (d) accountabilities, responsibilities and authorities for SMS processes and procedures.

#### **GM to AMC 3.1.5(a) SMS Documentation**

APPENDIX 8 provides an example of typical contents of an SMS manual.

#### **AMC to 3.1.5(b) SMS Documentation**

- (a) The format of the records should be specified in the organisation's procedures.
- (b) Records should be stored in a manner that ensures protection from damage, alteration, and theft.
- (c) The record keeping system should ensure that all records are accessible whenever needed and records should be organised in a way that ensures traceability throughout the required retention period.
- (d) Paper systems should use robust material which can withstand normal handling and filing. Computer systems should have at least one backup system which should be updated within 24 hours of any new entry. Computer systems should include safeguards against the ability of unauthorised personnel to alter the data.
- (e) All computer hardware used to ensure data backup should be stored in a different location from that containing the working data, and in an environment that ensures they remain in good condition. When hardware or software changes take place, special care should be taken that all necessary data continues to be accessible at least through the full period specified in the relevant provision. In the absence of such indication, all records should be kept for a minimum period of 5 years.
- (f) The records should remain legible throughout the required retention period. The retention period starts when the record has been created or last amended.
- (g) Records related to Safety Management System processes should include but are not limited to:

- 1) The results of the assessment of the potential adverse consequences or outcome of each hazard (APPENDIX 10);
- 2) Safety Performance Indicators, targets and related charts;
- 3) record of completed or in-progress safety assessments;
- 4) SMS internal review or audit records;
- 5) safety promotion records;
- 6) personnel SMS/safety training records;
- 7) SMS/safety committee meeting minutes; and
- 8) SMS implementation plan (during implementation process).

### **GM to 3.2 SAFETY RISK MANAGEMENT**

An example of the safety risk management process is illustrated in APPENDIX 3, in addition, other risk management methods e.g. BowTie can be useful particularly in the implementation of the mitigations and controls. APPENDIX 11 shows an Example of BowTie model.

### **AMC 1 to 3.2.1 Hazard Identification**

Hazards should be identified through proactive methodologies or as a result of accident or incident investigations (reactive), and where practical through predictive methodologies.

Data sources of hazard identification should be both internal and external to the organisation. Organisations should establish internal confidential reporting channels to maximise data capturing.

### **AMC 2 to 3.2.1 Hazard Identification**

The internal safety reporting system should contain the following elements:

- (a) the collection and evaluation of those errors, near-misses, and hazards reported internally;
- (b) corrective and preventive actions are taken internally to address any safety issues and hazards;
- (c) feedback to the organisation's safety training, whilst maintaining appropriate confidentiality;
- (d) provision of feedback to the reporter to ensure his support to the occurrence reporting system and disseminate the results to other relevant parties.
- (e) A non-punitive approach which encourages safety reporting within a system that clearly indicates which types of behaviours are unacceptable.
- (f) an investigation process to:

- 1) identify and address the factors contributing to occurrences in order to reduce the likelihood of reoccurrence;
- 2) identify adverse trends;
- 3) identify those reports which require further investigation; and
- 4) establish all root causes, including any technical, organisational, managerial, or human factors issues, and any other contributing factors relating to the event (APPENDIX 10).

#### **GM to AMC1 to 3.2.1 Hazard Identification**

(a) In addition to the internal reporting systems, flight data analysis and internal audits, Internal hazard identification data sources may include:

- 1) normal operation monitoring schemes ;
- 2) safety surveys;
- 3) feedback from training; and
- 4) investigation and follow-up reports on accidents/incidents.

(b) External data sources for hazard identification may include:

- 1) industry accident reports;
- 2) BCAA mandatory incident reporting systems;
- 3) BCAA audits; and
- 4) information exchange systems.

#### **GM to 3.2.1 Hazard Identification**

The following may be considered while engaged in the hazard identification process:

- (a) design factors, including equipment and task design;
- (b) human performance limitations (e.g. physiological, psychological and cognitive);
- (c) procedures and operating practices, including their documentation and checklists and their validation under actual operating conditions;
- (d) communication factors, including media, terminology and language;

(e) organisational factors, such as those related to the recruitment, training and retention of personnel, the compatibility of production and safety goals, the allocation of resources, operating pressures and the corporate safety culture;

(f) factors related to the operational environment of the aviation system (e.g. ambient noise and vibration, temperature, lighting and the availability of protective equipment and clothing);

(g) regulatory oversight factors, including the applicability and enforceability of regulations and the certification of equipment, personnel and procedures;

(h) performance monitoring systems that can detect practical drift or operational deviations; and human-machine interface factors.

(i) Stem from the existence of complex, (sub-) contract and other operational arrangements.

### **AMC to 3.2.2 Safety Risk Assessment and Mitigations**

Written procedures for developing and implementing Corrective Actions should be established. These should:

(a) Result in a specific corrective action plan that addresses the following:

1) Development and proposal of the corrective action.

2) Analysis and final approval level of the corrective action, including who is responsible for approval of the corrective action.

3) Who will implement the corrective action.

4) How the responsible person will implement the corrective action.

5) When the corrective action completion due date is.

6) Who will evaluate the outcome and how, including identification of data requiring collection, awareness of the possibility of unintended consequences, and events that should trigger a response.

7) Who will monitor the status of the corrective action and how.

8) Reporting the status of the corrective action (to whom, with what frequency).

### **GM to 3.2.2 Safety Risk Assessment and Mitigations**

The process starts with the identification of hazards and their potential consequences. The safety risks are then assessed in terms of probability and severity, to define the level of safety risk (safety risk index). An example of a safety risk matrix is illustrated in APPENDIX 4. The completed hazard identification and safety risk assessment and mitigation process is then documented and approved as appropriate Risk acceptance criteria is established based on the organisation's safety policy and objectives. Once risks have been assessed, the organisation

should engage in a decision-making process to determine the need to implement risk mitigation measures. Each safety risk mitigation measure should be examined from the following perspectives:

- (a) Effectiveness: The extent to which the measure reduces or eliminates the safety risk. Effectiveness can be determined in terms of the technical, training and procedural defences that can reduce or eliminate safety risks.
- (b) Cost/benefit: The extent to which the perceived benefits of the mitigation outweigh the costs.
- (c) Practicality: The extent to which the mitigation is implementable and appropriate in terms of available technology, financial and administrative resources etc.
- (d) Acceptability: The extent to which the stakeholders willingly adopt and embrace them
- (e) Enforceability: The extent to which compliance with new operating procedures can be monitored.
- (f) Durability: The extent to which the measure will be sustainable and effective.
- (g) Residual safety risks: The degree of safety risk that remains subsequent to the implementation of the initial mitigation, and which may necessitate additional risk control measures.
- (h) Unintended consequences: The introduction of new hazards and related safety risks associated with the implementation of any mitigation alternative.

The three generic safety risk mitigation approaches include:

- a) Avoidance. The activity is suspended, either because the associated safety risks are intolerable or deemed unacceptable vis-à-vis the associated benefits.
- b) Reduction. Some safety risk exposure is accepted, although the severity or probability associated with the risks are lessened, possibly by measures that mitigate the related consequences.
- c) Segregation of exposure. Action is taken to isolate the potential consequences related to the hazard or to establish multiple layers of defences to protect against them.

A risk mitigation strategy may involve one of the approaches described above, or may include multiple approaches. It is important to consider the full range of possible control measures to find an optimal solution. The effectiveness of each alternative strategy should be evaluated before a decision can be taken. Once the mitigation has been approved and implemented, any associated impact on safety performance provides feedback to the Organisation's safety assurance process. This checks efficiency and effectiveness of the defences under the new operational conditions.

The effective implementation of all above mentioned processes, including evidences of its day by day proper implementation, should be available and used on the internal organisation quality assurance process, with the aim to accomplish its utmost objectives.

Quality assurance process should be developed in a documented continuous monitoring audit approach. It should ensure that investigations are effectively performed to find occurrences' root causes and issue targeted and feasible recommendations to implement corrective actions by the accountable managerial staff in due time.

### **GM to 3.3 SAFETY ASSURANCE**

Safety assurance consists of processes and activities undertaken by the organisation to determine whether the SMS is operating according to expectations and requirements. The organisation should continually monitor its internal processes as well as its operating environment to detect changes or deviations that may introduce emerging safety risks or the degradation of existing risk controls. Such changes or deviations may then be addressed together with the safety risk management process.

The safety assurance process complements the quality assurance process, with each having requirements for analysis, documentation, and management reviews to ensure that certain performance criteria are met. While quality assurance typically focuses on the organisation's compliance with regulatory requirements, safety assurance specifically monitors the effectiveness of safety risk controls.

### **AMC 1 for 3.3.1 Safety Performance Monitoring and Measurement**

Safety Performance Monitoring processes and systems should include processes and systems for the following:

- a) Continuous monitoring of operational processes including establishment and monitoring of SPIs and SPTs
- b) Periodic monitoring of the operational environment to detect changes.
- c) Auditing of operational processes and systems.
- d) Evaluations of the SMS.
- e) Evaluations of safety data
- f) Evaluation of contextual data related the organisation environment, conditions, resources and management.

*Note 1: The BCAA selects some of the SPTs in order to achieve and monitor the Kingdom of Bahrain Acceptable Level of Safety Performance under the State Safety Programme. In order for the BCAA to periodically monitor the SPTs, the organisations will be required to submit specific data, such as flight hours, engine hours, cycles, number of movements and other required information to the BCAA in a time and in a manner determined by the BCAA.*

*Note 2: Upon completion of the assessments, evaluations and reviews, if ineffective controls, new hazards, or potential hazards are identified, the Organisation should use the safety risk management process.*

#### **AMC 2 to 3.3.1 Safety Performance Monitoring and Measurement**

The SPI/SPT agreement should be done between the ASSD and the organisation. The ASSD will review the SPI's and SPT appropriate, relevant to operational safety and uses the appropriate measuring matrix.

#### **AMC 3 to 3.3.1 Safety Performance Monitoring and Measurement**

The baseline objectives for organisations with insufficient data should target matters of concern for the organisation such as enhancing the safety culture, just culture, reporting and/or improving the level of safety. These initiatives have broad spectrum and may range from Intern low consequence events having a direct bearing on the way activities and processes are implemented; to major possible safety risks, adoption of best industry practices and maintaining zero occurrence levels for particular events even if the organisation did not encounter such events. In this sense, these initiatives act as proactive defences without the presence of actual SPIs. Such defences should be checked for effectiveness as part of the safety assurance processes.

#### **GM1 to 3.3.1 Safety Performance Monitoring and Measurement**

APPENDIX 7 provides examples of SPIs and SPTs.

#### **AMC to 3.4 Management of Change**

The organisation should demonstrate that:

- (a) it has established a process, and conducts formal hazard analyses/risk assessment for major operational changes, major organisational changes, and changes in key personnel
- (b) safety assessment/risk assessments are aviation safety focused;
- (c) key stakeholders are involved in the change management process, as appropriate;

#### **GM 1 to 3.4 Management of Change**

Considerations for management of change are:

- (a) Unless properly managed, changes in organisational structure, facilities, scope of work/approval, personnel, documentation, policies and procedures, etc., may result in the inadvertent introduction of new hazards, exposing the Organisation to new or increased risk.
- (b) The management of change should be a process aiming at identifying external and internal changes that may have an adverse effect on safety before implementation. It should make use of the organisation's existing hazard identification, risk assessment, and mitigation processes.

(c) Regardless of the magnitude of change, large or small, there should always be a proactive consideration for safety implications. This is primarily the responsibility of the team proposing and/or implementing the change. However, change can only be successful if all personnel affected by the change are engaged, involved, and participate in the process. The magnitude of change, its safety criticality, and its potential impact on human performance should be assessed in any change management process. **See GM 2 to 3.4**

(d) Management of change provides principles and a structured framework for managing all aspects of the change. Disciplined application of change management can maximise the effectiveness of the change, engage staff, and minimise the risks inherent in change.

(e) Some examples of change include, but are not limited to:

- 1) organisational restructuring;
- 2) acquisition of equipment;
- 3) new aircraft type included in the approval;
- 4) additional aircraft or equipment of the same or similar type;
- 5) significant changes in personnel (affecting key personnel and/or large numbers of personnel, high turnover);
- 6) new or amended regulations, procedures;
- 7) competition;
- 8) customer base;
- 9) security;
- 10) financial status;
- 11) new schedule(s), location(s), type(s) of maintenance, and/or operational procedures;
- 12) the generation or alteration of maintenance data; and
- 13) change of a safety significant subcontractor.
- 14) changes to risk control, policy, etc.

(f) The change also has the potential to introduce new, or exacerbate pre-existing, human factors issues. For example, changes in machinery, equipment, technology, procedures, work organisation, or work processes are likely to affect performance.

(g) The purpose of integrating human factors into the management of change is to minimise potential risks by specifically considering the impact of the change on the people within a system.

(h) Special consideration, including any human factors, during the 'transition period'. In addition, the activities utilized to manage these issues should be integrated into the change management plan.

### **GM 2 to 3.4 Management of Change**

The organisation's management of change process should consider:

(a) Criticality: Criticality assessments determine the systems, equipment or activities that are essential to the safe operation of aircraft. While criticality is normally assessed during the system design process, it is also relevant during a situation of change. Systems, equipment and activities that have higher safety criticality should be reviewed following change to make sure that corrective actions can be taken to control potentially emerging safety risks.

(b) Stability of systems and operational environments: Changes may be planned and under the direct control of the organisation. Such changes include organisational growth or contraction, the expansion of products or services delivered, or the introduction of new technologies. Unplanned changes may include those related to economic cycles, labour unrest, as well as changes to the political, regulatory or operating environments.

(c) Past performance: Past performance of critical systems and trend analyses in the safety assurance process should be employed to anticipate and monitor safety performance under situations of change. The monitoring of past performance will also assure the effectiveness of corrective actions taken to address safety deficiencies identified as a result of audits, evaluations, investigations or reports.

### **AMC to 3.5 Continuous Improvement of the SMS**

Monitoring and assessment activities conducted for the purpose of this requirement should be conducted by persons that are functionally independent of the technical processes being evaluated.

### **GM to 3.5 Continuous Improvement of the SMS**

Importance of continuous improvements:

(a) Continuous improvement is measured through the monitoring of an organisation's Safety Performance Indicators, evaluations and independent SMS audits and is related to the maturity and effectiveness of an SMS. Safety assurance processes support improvements to the SMS through continual verification and follow-up actions.

(b) Internal evaluations/ audits involve assessment of the organisation's aviation activities that can provide information useful to the organisation's decision-making processes.

(c) The internal evaluation function includes evaluation of safety management functions, policymaking, safety risk management, safety assurance and safety promotion throughout the organisation.

### **AMC to 3.6.1 Training and education**

The following are elements that should be established and maintained as part of the Safety training programme:

- (a) Safety training and education curricula should consist of the following:
  - 1) organisational safety policies, goals and objectives;
  - 2) organisational safety roles and responsibilities related to safety;
  - 3) basic safety risk management principles;
  - 4) safety reporting systems;
  - 5) safety management support (including evaluation and audit programmes);
  - 6) lines of communication for dissemination of safety information; and
  - 7) initial indoctrination and, if required, recurrent training requirements.
- (b) Training requirements should be consistent with the needs and complexity of the organisation.
- (c) Training procedures should specify initial and, if required, recurrent safety training standards for operational personnel, managers and supervisors, senior managers and the Accountable Manager. The SMS training documentation should also specify responsibilities for development of training content and scheduling.
- (d) Safety training for senior managers should include content related to compliance with national and organisational safety requirements, allocation of resources and active promotion of the SMS including effective interdepartmental safety communication. In addition, safety training for senior managers should include material on establishing Safety Performance Targets and alert levels.
- (e) The Accountable Manager training should be at a high level providing an understanding of the SMS and its relationship to the organisation's overall business strategy.

### **GM to 3.6.2 Safety Communication**

Safety communication is an essential foundation for the development and maintenance of an adequate safety culture. The modes of communication may include:

- (a) newsletters;
- (b) presentations;
- (c) safety notices;
- (d) safety awareness posters;

(e) lectures;

(f) workshops; and

(g) workplace safety oriented meetings between staff and the Accountable Manager or Senior Managers.

## **APPENDIX 2: SAFETY CULTURE AND JUST CULTURE**

“Safety Culture is the set of enduring values member of every level of an organization. Safety Culture refers to the extent to which every individual and every group of the organization is aware of the risks and unknown hazards induced by its activities; is continuously behaving so as to preserve and enhance safety; is willing and able to adapt itself when facing safety issues; is willing to communicate safety issues; and consistently evaluates safety related behaviour.”

To support the assessment and management of Safety Culture, the six main components (called Characteristics) of Safety Culture are described:

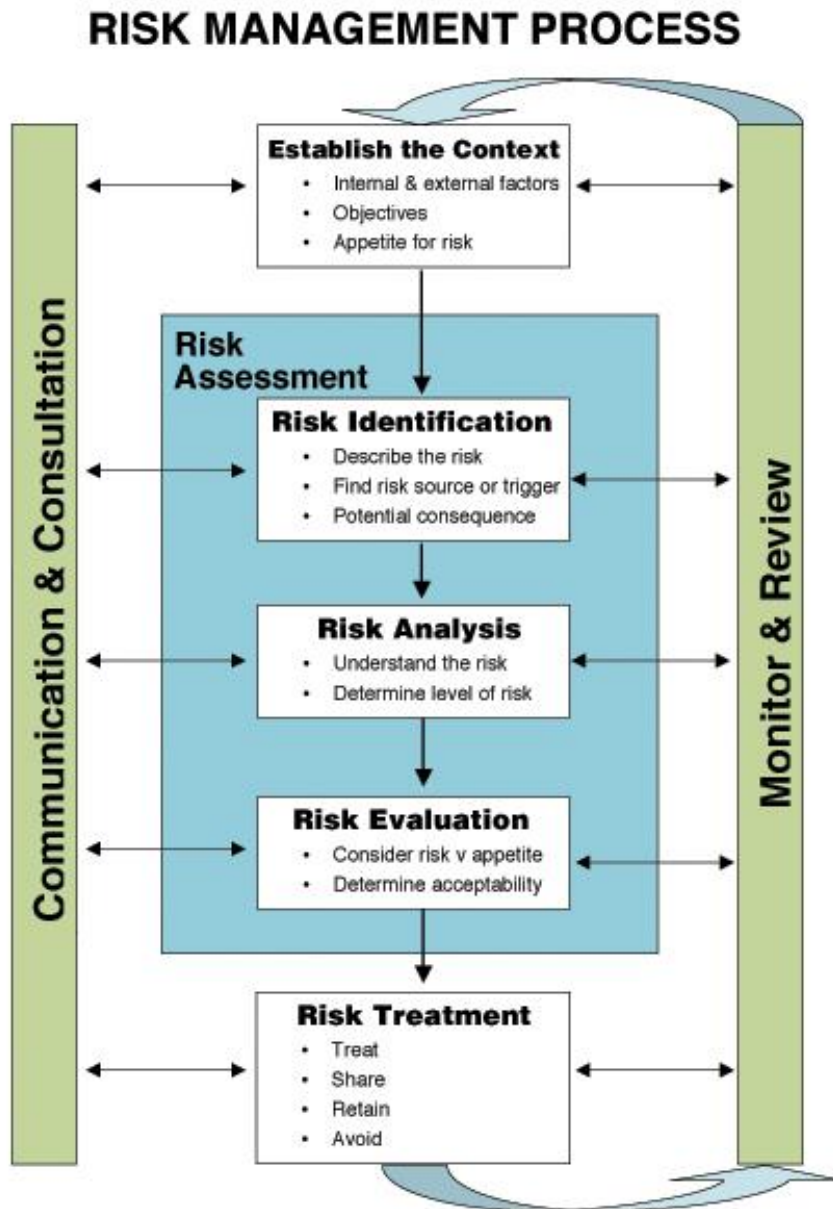

1. Commitment
2. Behaviour
3. Awareness
4. Adaptability
5. Information
6. Justness

Just Culture is clearly an element of [a Safety Culture framework] (in the Justness characteristic or component). Just culture is defined as: “a culture in which front line operators or others are not punished for actions, omissions or decisions taken by them that are commensurate with their experience and training, but where gross negligence, wilful violations and destructive acts are not tolerated”. An important part of a good just culture depends on how an organization oversees safety reports which may contain information about potentially unsafe/risky actions, either directly or indirectly taken by its employees. These may be the result of slips, common mistakes, technical failures or can even be related to systematic training issues. When reviewing such occurrences, consideration should be given as to whether the person’s actions were reasonable. It could be that the actions taken were the same as what another competent person may have reasonably taken in a similar situation. Part of this is ensuring that the right level of expertise is available to help understand the context and situation surrounding what occurred. Employees at all levels should be encouraged to report any occurrences or issues that may affect safety and be open to learning from these.

A safety culture and a just culture should be fostered. However in the rare cases, in which gross negligence, wilful violations or destructive acts are apparent, such acts/behaviour should not be tolerated. Through following of clear and proper procedures, anyone involved in cases of possible gross negligence should receive fair treatment and proportionate remedial action to prevent a reoccurrence.

### APPENDIX 3: HAZARD IDENTIFICATION AND RISK MANAGEMENT

Example:

## APPENDIX 4: SAFETY RISK ASSESSMENT MATRIX

The following is an example of safety risk assessment matrix

| Risk probability       | Risk severity     |                |            |            |                 |
|------------------------|-------------------|----------------|------------|------------|-----------------|
|                        | Catastrophic<br>A | Hazardous<br>B | Major<br>C | Minor<br>D | Negligible<br>E |
| Frequent 5             | <b>5A</b>         | <b>5B</b>      | <b>5C</b>  | <b>5D</b>  | <b>5E</b>       |
| Occasional 4           | <b>4A</b>         | <b>4B</b>      | <b>4C</b>  | <b>4D</b>  | <b>4E</b>       |
| Remote 3               | <b>3A</b>         | <b>3B</b>      | <b>3C</b>  | <b>3D</b>  | <b>3E</b>       |
| Improbable 2           | <b>2A</b>         | <b>2B</b>      | <b>2C</b>  | <b>2D</b>  | <b>2E</b>       |
| Extremely improbable 1 | <b>1A</b>         | <b>1B</b>      | <b>1C</b>  | <b>1D</b>  | <b>1E</b>       |

### Safety risk probability table

The following is an example of a risk probability table:

| Risk Probability          | Meaning                                               | Value |
|---------------------------|-------------------------------------------------------|-------|
| Frequent/Almost certain   | Likely to occur many times (has occurred frequently)  | 5     |
| Occasional/Likely         | Likely to occur sometimes (has occurred infrequently) | 4     |
| Remote/Moderate           | Unlikely to occur, but possible (has occurred rarely) | 3     |
| Improbable/Unlikely       | Very unlikely to occur (not known to have occurred)   | 2     |
| Extremely improbable/Rare | Almost inconceivable that the event will occur        | 1     |

Using this matrix, risks can be categorised according to an assessment of their potential severity and probability. Based on this matrix example, risks reflected as being unacceptable (red, amber and yellow categories) must be mitigated so as to reduce their severity and/or probability. The organisation should consider suspension of any activities that continue to

expose the organisation to intolerable safety risks in the absence of mitigating actions that reduce the risks to an acceptable level (green or lower).

## **APPENDIX 5: EMERGENCY RESPONSE PLAN CONTENT**

An ERP would normally be documented in the format of a manual that should set out the responsibilities, roles and actions of the various agencies and personnel involved in dealing with specific emergencies. An ERP should take account of such considerations as:

(a) Governing policies. The ERP should provide direction for responding to emergencies, such as governing laws and regulations for investigations, agreements with local authorities, company policies and priorities.

(b) Organisation. The ERP should outline management's intentions by:

- 1) designating who will lead and who will be assigned to the response teams;
- 2) defining the roles and responsibilities of personnel assigned to the response teams;
- 3) clarifying the reporting lines of authority;
- 4) setting up an Emergency Management Centre (EMC);
- 5) establishing procedures for receiving a large number of requests for information, especially during the first few days after a major accident;
- 6) designating the corporate spokesperson for dealing with the media;
- 7) defining what resources will be available, including financial authorities for immediate activities;
- 8) designating the company representative to any formal investigations undertaken by State officials;
- 9) defining a call-out plan for key personnel.

An organisational chart could be used to show organisational functions and communication relationships.

(c) Notifications. The plan should specify who in the organisation should be notified of an emergency, who will make external notifications and by what means. The notification needs of the following should be considered:

- 1) management;
- 2) State authorities (search and rescue, the regulatory authority, the accident investigation board, etc.);

- 3) local emergency response services (aerodrome authorities, fire fighters, police, ambulance, medical agencies, etc.);
- 4) relatives of victims (a sensitive issue that may be handled by the police);
- 5) company personnel;
- 6) media; and
- 7) legal, accounting, insurers, etc.

(d) Initial response. Depending on the circumstances, an initial response team may be dispatched to the accident or crisis site to augment local resources and oversee the organisation's interest. Factors to be considered for such a team include:

- 1) Who should lead the initial response team?
- 2) Who should be included on the initial response team?
- 3) Who should speak for the organisation at the accident site?
- 4) What would be required by way of special equipment, clothing, documentation, transportation, accommodation, etc.?

(e) Additional assistance. Employees with appropriate training and experience can provide useful support during the preparation, exercising and updating of an organisation's ERP. Their experience may be useful in planning and executing such tasks as:

- 1) acting as passengers or customers in exercises;
- 2) handling survivors or external parties;
- 3) dealing with next of kin, authorities, etc.

(f) Emergency Management Centre (EMC). An EMC (normally on standby mode) may be established at the organisation's headquarters once the activation command post (CP) may be established at or near the crisis site. The ERP should address how the following requirements are to be met:

- 1) staffing (perhaps for 24 hours a day, 7 days per week, during the initial response period);
- 2) communications equipment (telephones, facsimile, Internet, etc.);
- 3) documentation requirements, maintenance of emergency activity logs;
- 4) impounding related company records;
- 5) office furnishings and supplies; and

6) reference documents (such as emergency response checklists and procedures, company manuals, aerodrome emergency plans and telephone lists).

The services of a crisis centre may be contracted from an airline or other specialist organisation to look after the Organisation's interests in a crisis away from normally supplement such a contracted centre as soon as possible.

(g) Records. In addition to the organisation's need to maintain logse of organisationwill also be required to provide information to any State investigation team. The ERP should address the following types of information required by investigators:

- 1) all relevant records about the product or service concerned;
- 2) lists of points of contact and any personnel associated with the occurrence;
- 3) notes of any interviews (and statements) with anyone associated with the event;
- 4) any photographic or other evidence.

(h) Accident site. For a major accident, representatives from many jurisdictions have legitimate reasons for accessing the site: for example, police; fire fighters; medics; aerodrome authorities; coroners (medical examining officers) to deal with fatalities; State accident investigators; relief agencies such as the Red Crescent and even the media. Although coordination of the activities of these stakeholders is the responsibility of the State's polic Organisation should clarify the following aspects of activities at the accident site:

- 1) nominating a senior company representative at the accident site if:
  - i. at home base;
  - ii. away from home base;
  - iii. offshore or in a foreign State;
- 2) management of surviving victims;
- 3) the needs of the relatives of victims;
- 4) security of the wreckage;
- 5) handling of human remains and personal property of the deceased;
- 6) preservation of evidence;
- 7) provision of assistance (as required) to the investigation authorities;
- 8) removal and disposal of the wreckage; etc.

(i) News media. How the company responds to the media may affect how well the company recovers from the event. Clear direction is required regarding, for example:

1) what information is protected by statute (FDR data, CVR and ATC recordings, witness statements, etc.);

2) who may speak on behalf of the parent organisation at head office and at the accident site (public relations manager, chief executive officer or other senior executive, manager, owner);

3) prepared statements for immediate response to media queries;

4) what information may be released (what should be avoided);

5) the timing and content of the company's initial statement;

6) provisions for regular updates to the media.

(j) Formal investigations. Guidance for company personnel dealing with State accident investigators and police should be provided.

(k) Family assistance. The ERP should also include guidance on the organisation's approach to assisting crisis victims or customer organisations. This guidance may include such things as:

1) State requirements for the provision of assistance services;

2) travel and accommodation arrangements to visit the crisis site;

3) programme coordinator and point(s) of contact for victims/customers;

4) provision of up-to-date information;

5) temporary assistance to victims or customers.

(l) Post-occurrence review. Direction should be provided to ensure that, following the emergency, key personnel carry out a full debrief and record all significant lessons learned which may result in amendments to the ERP and associated procedures.

## **APPENDIX 6: SMS IMPLEMENTATION PLAN**

This APPENDIX includes typical guidance of a SMS implementation plan for organisations that are transitioning from traditional safety programme in to an integrated SMS or for new Organisations.

A system review and description of the SMS framework and interface with existing systems and processes is the first step in defining the scope and applicability of the SMS. This can be achieved by conducting a gap analysis, which provides an opportunity to identify any gaps related to the organisation's SMS components and in the organisation elements. The gap analysis facilitates development of an SMS implementation plan by identifying the gaps that must be addressed to fully implement an SMS. Once the gap analysis has been completed and fully documented, the resources and processes that have been identified as missing or inadequate will form the basis of the SMS implementation plan.

The SMS Implementation Plan consists of four implementation phases with each phase associated with various elements (or sub-elements) as per the ICAO framework.

### **Phase 1**

(a) The objective of Phase 1 of SMS implementation is to provide a blueprint of how the SMS requirements can be met and integrated into the organisation's control systems, as well as an accountability framework for the implementation of the SMS.

(b) During Phase 1, basic planning and assignment of responsibilities are established. Central to Phase 1 is the gap analysis. From the gap analysis, an organisation can determine the status of its existing safety management processes and can begin planning for the development of further safety management processes. The significant output of Phase 1 is the SMS implementation plan. (APPENDIX 6 to Chapter 3 of ICAO Doc 9859 - SMS Acceptance/Assessment (Example) provides further guidance).

(c) At the completion of Phase 1, the following activities should be finalized in such a manner that meets the expectations of the BCAA, as set forth in relevant requirements and guidance material:

### **Management commitment and responsibility**

(a) Identify the accountable executive and the safety accountabilities of managers. This activity is based on Elements 2.1.1 and 2.1.2 of the SMS framework.

(b) Establish an SMS implementation team. The team should be comprised of representatives from the relevant departments. The team's role is to drive the SMS implementation stage to its final implementation. Other functions of the implementation team will include but not be limited to:

- 1) developing the SMS implementation plan;
- 2) ensuring the adequate SMS training and technical expertise of the team in order to effectively implement the SMS elements and related processes; and
- 3) monitoring of and reporting on the progress of the SMS implementation, providing regular updates and coordinating with the SMS accountable executive.

(c) Define the scope of the organisation's activities (departments/divisions) to which the SMS will be applicable. The scope of the organisation's SMS applicability will subsequently need to be described in the SMS document as appropriate. This activity is based on Element 2.1.5 of the SMS framework. Guidance on the system description is provided in 2.1.5 of this chapter.

(d) Conduct a gap analysis of the organisation's current systems and processes in relation to the ICAO SMS framework requirements (or the relevant SMS regulatory requirements)

| <b>Phase 1 (for application)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Phase 2 (up to 12 months)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Phase 3 (up to 18 months)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Phase 4 (up to 18 months)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1. SMS Element 3.1.1;<br/>a) identify the SMS accountable executive;<br/>b) establish an SMS implementation team;<br/>c) define the scope of the SMS.<br/>d) perform an SMS gap analysis.</p> <p>2. SMS Element 3.1.5:<br/>a) develop an SMS implementation plan</p> <p>3. SMS Element 3.1.3:<br/>a) establish a key person/office responsible for the administration and maintenance of the SMS.</p> <p>4. SMS Element 3.6.1:<br/>a) establish an SMS training program for personnel, with priority for the SMS implementation team.</p> <p>5. SMS Element 3.6.2<br/>a) initiate SMS/safety communication channels</p> | <p>1. SMS Element 3.1.1:<br/>a) establish the safety policy and objectives</p> <p>2. SMS Element 3.1.2:<br/>a) define safety management responsibilities and accountabilities across relevant departments of the organisation.<br/>b) establish an SMS/safety coordination mechanism/committee.<br/>c) establish departmental/divisional SAGs where applicable.</p> <p>3. SMS Element 3.1.4:<br/>a) establish an emergency response plan</p> <p>4. SMS Element 3.1.5:<br/>a) initiate progressive development of an SMS document/manual and other supporting documentation.</p> | <p>1. SMS Element 3.1.1:<br/>a) establish a voluntary hazard reporting procedure.</p> <p>2. SMS Element 3.2.2<br/>a) establish safety risk management procedures.</p> <p>3. SMS Element 3.3.1:<br/>a) establish occurrence reporting and investigation procedures;<br/>b) establish a safety data collection and processing system for high consequence outcomes<br/>c) develop high consequence SPIs and associated targets and alert settings.-</p> <p>4. SMS Element 3.4:<br/>a) establish a management of change procedure that includes safety Risk assessment.</p> <p>5. SMS Element 3.5<br/>a) establish an internal quality audit program<br/>b) establish an external quality audit program.</p> | <p>1. SMS Element 3.1.1:<br/>a) enhance the existing disciplinary procedure/policy with due consideration of unintentional errors or mistakes from deliberate or gross violations.</p> <p>2. SMS Element 3.2.1:<br/>a) integrate hazards identified from occurrence investigation reports with the voluntary hazard reporting system<br/>b) integrate hazard identification and risk management procedures with the subcontractor's or customer's SMS where applicable</p> <p>3. SMS Element 3.3.1:<br/>a) enhance the safety data collection and processing system to include lower consequence events<br/>b) develop lower consequence SPIs and associated targets/alert settings.</p> <p>4. SMS Element 3.5:<br/>a) establish SMS audit programs or integrate them into existing internal and external audit programs<br/>b) establish other operational SMS review/survey programs where appropriate.</p> <p>5. SMS Element 3.6.1:</p> |

|  |  |  |                                                                                                                                                                                                                |
|--|--|--|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  |  |  | <p>a) ensure that the SMS training program for all relevant personnel has been completed</p> <p>6. SMS Element 3.6.2:</p> <p>a) promote safety information sharing and exchange internally and externally.</p> |
|--|--|--|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

SMS Element 3.1.5: SMS documentation (Phases 1 to 4)

SMS Elements 3.6.1 and 3.6.2: SMS training, education and communication (Phases 1 and thereafter)

Note 1:- The implementation period indicated is an approximation. The actual implementation period is dependent on the scope of actions required for each element allocated and the size/complexity of the organisation.

Note 2:- The SMS element numbers indicated do not correspond to the ICAO SMS element numbers. Suffixes such as a), b) and c) indicate that the element has been subdivided to facilitate the phased implementation approach.

### **SMS implementation plan — Element 3.1.5**

(a) Develop an SMS implementation plan on how the organisation will implement the SMS on the basis of the identified system and process gaps resulting from the gap analysis.

### **Appointment of key safety personnel — Element 3.1.3**

(a) Identify the key SMS person (safety/quality function) within the organisation who will be responsible for administering the SMS on behalf of the accountable executive.

(b) Establish the safety services office.

### **Training and education — Element 3.6.1**

(a) Conduct a training needs analysis.

(b) Organize and set up schedules for appropriate training of all staff according to their individual responsibilities and involvement in the SMS.

(c) Develop safety training considering:

1) initial (general safety) job-specific training; and

2) recurrent training.

(d) Identify the costs associated with training.

(e) Develop a validation process that measures the effectiveness of training.

(f) Establish a safety training records system.

**Safety communication — Element 3.6.2**

(a) Initiate a mechanism or medium for safety communication.

(b) Establish a means to convey safety information through any of:

- 1) safety newsletters, notices and bulletins;
- 2) websites;
- 3) email;
- 4) workshops, lectures, posters etc.

**Phase 2**

The objective of Phase 2 is to implement essential safety management processes, while at the same time correcting potential deficiencies in existing safety management processes. Most organisations will have some basic safety management activities in place at different levels of implementation. This phase aims at consolidating existing activities and developing those which do not yet exist.

**Management commitment and responsibility — Element 3.1.1**

(a) Develop a safety policy.

(b) Have the accountable executive sign the safety policy.

(c) Communicate the safety policy throughout the organisation.

(d) Establish a review schedule for the safety policy to ensure it remains relevant and appropriate to the organisation.

(e) Establish safety objectives for the SMS by developing safety performance standards in terms of:

- 1) Safety Performance Indicators;
- 2) Safety Performance Targets and alert levels; and
- 3) action plans.

f) Establish the SMS requirements for subcontractors:

- 1) establish a procedure to write SMS requirements into the contracting process; and
- 2) establish the SMS requirements in the bidding documentation.

**Safety accountabilities — Element 3.1.2**

- (a) Define safety accountabilities and communicate them throughout the organisation.
- (b) Establish the Safety Action Group (SAG).
- (c) Establish the safety/SMS coordination committee.
- (d) Define clear functions for the SAG and the safety/SMS coordination committee.
- (e) Establish lines of communication between the safety services office, the accountable executive, the SAG and the safety/SMS coordination committee.
- (f) Appoint the accountable executive as the chairperson of the safety/SMS coordination committee.
- (g) Develop a schedule of meetings for the safety services office to meet with the safety/SMS coordination committee and SAG as needed.

**Coordination of emergency response planning — Element 3.1.4**

- (a) Review the outline of the ERP related to the delegation of authority and assignment of emergency responsibilities.
- (b) Establish coordination procedures for action by key personnel during the emergency and the return to normal operations.
- (c) Identify external entities that will interact with the organisation during emergency situations.
- (d) Assess the respective ERPs of the external entities.
- (e) Establish coordination between the different ERPs.
- (f) Incorporate information about the coordination between the different ERPs in the organisation's SMS documentation.

*Note:- Refer to APPENDIX 5 for further guidance on ERP.*

**SMS documentation — Element 3.1.5**

- (a) Create an SMS documentation system to describe, store, retrieve and archive all SMS-related information and records by:

- 1) developing an SMS document that is either a stand-alone manual or a distinct section within an existing controlled organisation manual (refer to APPENDIX 8 for guidance on developing an SMS manual);
- 2) establishing an SMS filing system to collect and maintain current records relating to the organisation's ongoing SMS processes;
- 3) maintaining records to provide a historical reference as well as the current status of all SMS processes such as: a hazard register; an index of completed safety assessments; SMS/safety training records; current SPIs and associated safety objectives; internal SMS audit reports; SMS/safety committee meeting minutes and the SMS implementation plan;
- 4) maintaining records that will serve as evidence of the SMS operation and activities during internal or external assessment or audit of the SMS.

### **Phase 3**

The objective of Phase 3 is to establish safety risk management processes. Towards the end of Phase 3, the organisation will be ready to collect safety data and perform safety analyses based on information obtained through the various reporting systems.

#### **Hazard identification — Element 3.2.1**

- (a) Establish a voluntary reporting procedure.
- (b) Establish a programme/schedule for systematic review of all applicable aviation safety-related processes/equipment that are eligible for the HIRM process.
- (c) Establish a process for prioritization and assignment of identified hazards for risk mitigation.

#### **Safety risk assessment and mitigation — Element 3.2.2**

- (a) establish a safety risk management procedure, including its approval and periodic review process.
- (b) Develop and adopt safety risk matrices relevant to the organisation's operational or production processes.
- (c) Include adopted safety risk matrices and associated instructions in the organisation's SMS or risk management training material.

#### **Safety performance monitoring and measurement — Element 3.3.1**

- (a) Establish an internal occurrence reporting and investigation procedure. This may include mandatory or major defect reports (MDR) where applicable.

(b) Establish safety data collection, processing and analysis of high-consequence outcomes.

(c) Establish high consequence safety indicators (initial ALoSP) and their associated target and alert settings. Examples of high-consequence safety indicators are accident rates, serious incident rates and monitoring of high risk non-compliance outcomes. Refer to APPENDIX 7 for guidance on Safety Performance Indicators.

d) Reach an agreement with the BCAA on Safety Performance Indicators and Safety Performance Targets.

#### **The management of change — Element 3.4**

(a) Establish a formal process for the management of change that considers:

- 1) the vulnerability of systems and activities;
- 2) the stability of systems and operational environments;
- 3) past performance;
- 4) regulatory, industry and technological changes.

(b) Ensure that management of change procedures address the impact on existing safety performance and risk mitigation records before implementing new changes.

(c) Establish procedures to ensure that safety assessment of new aviation safety-related operations, processes and equipment are conducted (or accounted for) as applicable, before they are commissioned.

#### **Continuous improvement of the SMS — Element 3.5**

(a) Develop forms for internal evaluations.

(b) Define an internal audit process.

(c) Define an external audit process.

(d) Define a schedule for evaluation of facilities, equipment, documentation and procedures to be completed through audits and surveys.

(e) Develop documentation relevant to operational safety assurance.

#### **Phase 4**

Phase 4 is the final phase of SMS implementation. This phase involves the mature implementation of safety risk management and safety assurance. In this phase operational safety assurance is assessed through the implementation of periodic monitoring, feedback and continuous corrective action to maintain the effectiveness of safety risk controls.

#### **Management commitment and responsibility — Element 3.1.1**

(a) Enhance the existing disciplinary procedure/policy with due consideration of unintentional errors/ mistakes from deliberate/gross violations.

**Hazard identification — Element 3.2.1**

(a) Integrate the hazards identified from occurrence investigation reports with the voluntary reporting system.

(b) Integrate hazard identification and risk management procedures with the subcontractor or customer SMS where applicable.

(c) If necessary, develop a process for prioritizing collected hazards for risk mitigation based on areas of greater need or concern. Refer to APPENDIX 3 and 4 for guidance.

**Safety performance monitoring and measurement — Element 3.3.1**

(a) Enhance the safety data collection and processing system to include lower-consequence events.

(b) Establish lower-consequence safety/quality indicators with target/alert level monitoring as appropriate (mature ALoSP).

(c) Reach an agreement with the BCAA on lower-consequence Safety Performance Indicators and Safety Performance Target/alert levels.

**Continuous improvement of the SMS — Element 3.5**

(a) Establish SMS audits or integrate them into existing internal and external audit programmes.

(b) Establish other operational SMS review/survey programmes where appropriate.

**Training and education — Element 3.6.1**

(a) Complete an SMS training programme for all relevant personnel.

**Safety communication — Element 3.6.2**

(a) Establish mechanisms to promote safety information sharing and exchange internally and externally.

## APPENDIX 7: EXAMPLE SAFETY PERFORMANCE INDICATOR (SPI) FOR ORGANISATIONS

a) Air operators

SMS Safety Performance Indicators (individual Organisation)

| High Consequence Indicators<br>(occurrence/outcome- based)                     |                                               |                                                        | Lower Consequence Indicators<br>(event/activity- based)                            |                                               |                                                        |
|--------------------------------------------------------------------------------|-----------------------------------------------|--------------------------------------------------------|------------------------------------------------------------------------------------|-----------------------------------------------|--------------------------------------------------------|
| <i>Safety Performance Indicator</i>                                            | <i>Alert level criteria</i>                   | <i>Target level criteria</i>                           | <i>Safety Performance Indicator</i>                                                | <i>Alert level criteria</i>                   | <i>Target level criteria</i>                           |
| Air operator individual fleet monthly serious incident rate (e.g. per 1000 FH) | Average + 1/2/3 SD (annual or 2 yearly reset) | x% (e.g. 5%) improvement between each annual mean rate | Operator combined fleet monthly incident rate (e.g. per 1000 FH)                   | Average + 1/2/3 SD (annual or 2 yearly reset) | x% (e.g. 5%) improvement between each annual mean rate |
| Air operator combined fleet monthly serious incident rate (e.g. per 1000 FH)   | Average + 1/2/3 SD (annual or 2 yearly reset) | x% (e.g. 5%) improvement between each annual mean rate | Operator internal QMS/SMS annual audit LEI % or findings rate (findings per audit) | Consultation                                  | Consultation                                           |
| Air operator engine IFSD rate (e.g. per 1000 FH)                               | Average + 1/2/3 SD (annual or 2 yearly reset) | x% (e.g. 5%) improvement between each annual mean rate | Operator Voluntary hazard report rate (e.g. per 1000 FH)                           | Consultation                                  | Consultation                                           |
|                                                                                |                                               |                                                        | Operator DGR incident report rate (e.g. per 1000 FH)                               | Average + 1/2/3 SD (annual or 2 yearly reset) | x% (e.g. 5%) improvement between each annual mean rate |

## b) Aerodrome operators

## SMS Safety Performance Indicators (individual Organisation)

| High-consequence indicators<br>(occurrence/outcome-based)                                                                     |                                               |                                                        | Lower-consequence indicators<br>(event/activity- based)                                                                                                  |                                               |                                                        |

| <i>Safety Performance Indicator</i>                                                                           | <i>Alert level criteria</i>                                                           | <i>Target level criteria</i>                                                           | <i>Safety Performance Indicator</i>                                                                                    | <i>Alert level criteria</i>                   | <i>Target level criteria</i>                           |
| ATS operator quarterly FIR serious incident rate — involving any aircraft (e.g. per 100000 flight movements)  | Average + 1/2/3 SD (annual or 2 yearly reset)                                         | x% (e.g. 5%) improvement between each annual mean rate                                 | ATS operator quarterly FIR TCAS RA incident rate — involving any aircraft (e.g. per 100.000 flight movements)          | Average + 1/2/3 SD (annual or 2 yearly reset) | x% (e.g. 5%) improvement between each annual mean rate |
| ATS operator quarterly FIR TCAS RA incident rate — involving any aircraft (e.g. per 100.000 flight movements) | Assuming the historical annual average rate is 3, the possible alert rate could be 5. | Assuming the historical annual average rate is 3, the possible target rate could be 2. | ATS operator quarterly FIR level bust (LOS) incident rate — involving any aircraft (e.g. per 100.000 flight movements) | Average + 1/2/3 SD (annual or 2 yearly reset) | x% (e.g. 5%) improvement between each annual mean rate |
|                                                                                                               |                                                                                       |                                                                                        | ATS operator internal audit LEI % or findings rate (findings per audit)                                                | consultation                                  | consultation                                           |

## **APPENDIX 8: EXAMPLE of SMS MANUAL CONTENT**

### **1. Document control**

Describe how the manual(s) will be kept up to date and how the organisation will ensure that all personnel involved in safety-related duties have the most current version.

- (a) Hard copy or controlled electronic media and distribution list.
  
- (b) The correlation between the SMS manual and other existing manuals such as the maintenance control manual (MCM) or the operations manual.
  
- (c) The process for periodic review of the manual and its related forms/documents to ensure their continuing suitability, adequacy and effectiveness.
  
- (d) The manual's administration, approval and regulatory acceptance process.

*Cross-reference documents.*

Quality manual, engineering manual, etc.

### **2. SMS regulatory requirements**

Address current SMS regulations and guidance material for necessary reference and awareness by all concerned.

- (a) Spell out the current SMS regulations/standards. Include the compliance timeframe and advisory material references as applicable.
  
- (b) Where appropriate, elaborate on or explain the significance and implications of the regulations to the organisation.
  
- (c) Establish a correlation with other safety-related requirements or standards where appropriate.

*Cross-reference documents.*

SMS regulation/requirement references, SMS guidance document references, etc.

### **3. Scope and integration of the Safety Management System**

Describe the scope and extent of the organisation's aviation-related operations and facilities within which the SMS will apply. The scope of the processes, equipment and operations deemed eligible for the organisation's hazard identification risk management (HIRM) programme and should also be addressed.

- (a) Spell out the nature of the organisation's aviation business and its p industry as a whole.
  
- (b) Identify the major areas, departments, workshops and facilities of the organisation within which the SMS will apply.
  
- (c) Identify the major processes, operations and equipment which are deemed eligible for the

organisation's HIRM programme, especially those which are pertinent to aviation safety. If the scope of the HIRM-eligible processes, operations and equipment is too detailed or extensive, it may be controlled under a supplementary document as appropriate.

(d) Where the SMS is expected to be operated or administered across a group of interlinked organisations or contractors, define and document such integration and associated accountabilities as applicable.

(e) Where there are other related control/management systems within the organisation, such as QMS, OSHE and SeMS, identify their relevant integration (where applicable) within the aviation SMS.

*Cross-reference documents.*

*Quality manual, engineering manual, etc*

#### **4. Safety policy**

Describe the organisation's intentions, management principles and safety in terms of the product or Organisation. A safety policy should be a short description similar to a mission statement.

(a) The safety policy should be appropriate to the size and complexity of the organisation.

(b) The safety policy states the organisation's intentions, management principles and commitment to continuous improvement in aviation safety.

(c) The safety policy is approved and signed by the Accountable Manager.

(d) The safety policy is promoted by the Accountable Manager and all other managers.

(e) The safety policy is reviewed periodically.

(f) Personnel at all levels are involved in the establishment and maintenance of the Safety Management System.

(g) The safety policy is communicated to all employees with the intent that they are made aware of their individual safety obligations.

*Cross-reference documents.*

*OSHE safety policy, etc.*

#### **5. Safety objectives**

Describe the safety objectives of the organisation. The safety objectives should be a short statement that describes in broad terms what the organisation hopes to achieve.

*Criteria*

(a) The safety objectives have been established.

(b) The safety objectives are expressed as a top-level statement describing the organisation's commitment to achieving safety.

- (c) There is a formal process to develop a coherent set of safety objectives.
- (d) The safety objectives are publicized and distributed.
- (e) Resources have been allocated for achieving the objectives.
- (f) The safety objectives are linked to safety indicators to facilitate monitoring and measurement where appropriate.

*Cross-reference documents.*

Safety Performance Indicators document, etc.

## **6. Roles and responsibilities**

Describe the safety authorities, responsibilities and accountabilities for personnel involved in the SMS.

- (a) The Accountable Manager is responsible for ensuring that the Safety Management System is properly implemented and is performing to requirements in all areas of the organisation.
- (b) An appropriate safety manager (office), safety committee or Safety Action Groups have been appointed as appropriate.
- (c) Safety authorities, responsibilities and accountabilities of personnel at all levels of the organisation are defined and documented.
- (d) All personnel understand their authorities, responsibilities and accountabilities with regard to all safety management processes, decisions and actions.
- (e) An SMS organisational accountabilities diagram is available.

*Cross-reference documents.*

*Company exposition manual, SOP manual, administration manual, etc.*

## **7. Safety reporting**

A reporting system should include both reactive (accident/incident reports, etc.) and proactive/ predictive (hazard reports). Describe the respective reporting systems. Factors to consider include: report format, confidentiality, addressees, investigation/evaluation procedures, corrective/ preventive actions and report dissemination.

*Criteria*

- (a) The organisation has a procedure that provides for the capture of internal occurrences including accidents, incidents and other occurrences relevant to SMS.

(b) A distinction is to be made between mandatory reports (accidents, serious incidents, major defects, etc.), which are required to be notified to the GCAA, and other routine occurrence reports, which remain within the organisation.

(c) There is also a voluntary and confidential hazard/occurrence reporting system, incorporating appropriate identity/data protection as applicable.

(d) The respective reporting processes are simple, accessible and commensurate with the size of the organisation.

(e) High-consequence reports and associated recommendations are addressed to and reviewed by the appropriate level of management.

(f) Reports are collected in an appropriate database to facilitate the necessary analysis.

*Cross-reference documents.*

## **8. Hazard identification and risk assessment**

Describe the hazard identification system and how such data are collated. Describe the process for the categorization of hazards/risks and their subsequent prioritization for a documented safety assessment. Describe how the safety assessment process is conducted and how preventive action plans are implemented.

(a) Identified hazards are evaluated, prioritized and processed for risk assessment as appropriate.

(b) There is a structured process for risk assessment involving the evaluation of severity, likelihood, tolerability and preventive controls.

(c) Hazard identification and risk assessment procedures focus on aviation safety as their fundamental context.

(d) The risk assessment process utilizes worksheets, forms or software appropriate to the complexity of the organisation and operations involved.

(e) Completed safety assessments are approved by the appropriate level of management.

(f) There is a process for evaluating the effectiveness of the corrective, preventive and recovery measures that have been developed.

(g) There is a process for periodic review of completed safety assessments and documenting their outcomes.

*Cross-reference documents.*

## **9. Safety performance monitoring and measurement**

Describe the safety performance monitoring and measurement component of the SMS. This includes the organisation's SMS Safety Performance Indicators (SPIs).

(a) The formal process to develop and maintain a set of Safety Performance Indicators and their associated performance targets.

(b) Correlation established between the SPIs and the organisation's safety objectives applicable and the process of regulatory acceptance of the SPIs where required.

(c) The process of monitoring the performance of these SPIs including remedial action procedure whenever unacceptable or abnormal trends are triggered.

(d) Any other supplementary SMS or safety performance monitoring and measurement criteria or process.

*Cross-reference documents.*

#### **10. Safety-related investigations and remedial actions**

Describe how accidents/incidents/occurrences are investigated and processed within the organisation, including their correlation with the organisation's SMS hazard identification and risk management system.

(a) Procedures to ensure that reported accidents and incidents are investigated internally.

(b) Dissemination of completed investigation reports internally as well as to the CAA as applicable.

(c) A process for ensuring that corrective actions taken or recommended are carried out and for evaluating their outcomes/effectiveness.

(d) Procedure on disciplinary inquiry and actions associated with investigation report outcomes.

(e) Clearly defined conditions under which punitive disciplinary action would be considered (e.g. illegal activity, recklessness, gross negligence or wilful misconduct).

(f) A process to ensure that investigations include identification of active failures as well as contributing factors and hazards.

(g) Investigation procedure and format provides for findings on contributing factors or hazards to be processed for follow-up action by the organisation's hazard identification management system where appropriate.

*Cross-reference documents.*

#### **11. Safety training and communication**

Describe the type of SMS and other safety-related training that staff receive and the process for assuring the effectiveness of the training. Describe how such training procedures are documented.

Describe the safety communication processes/channels within the organisation.

(a) The training syllabus, eligibility and requirements are documented.

(b) There is a validation process that measures the effectiveness of training.

(c) The training includes initial, recurrent and update training, where applicable.

(d) The organisation's SMS training is part of the organisation's overall training programme.

(e) SMS awareness is incorporated into the employment or indoctrination programme.

(f) The safety communication processes/channels within the organisation.

*Cross-reference documents.*

## **12. Continuous improvement and SMS audit**

Describe the process for the continuous review and improvement of the SMS.

(a) The process for regular internal audit/review of the organisation's SMS to ensure its suitability, adequacy and effectiveness.

(b) Describe any other programmes contributing to continuous improvement of the organisation's SMS and safety performance, e.g. MEDA, safety surveys, ISO systems.

*Cross-reference documents.*

## **13. SMS records management**

Describe the method of storing all SMS-related records and documents.

(a) The organisation has an SMS records or archiving system that ensures the retention of all records generated in conjunction with the implementation and operation of the SMS.

(b) Records to be kept include hazard reports, risk assessment reports, Safety Action Group/safety meeting notes, Safety Performance Indicator charts, SMS audit reports and SMS training records.

(c) Records should be traceable for all elements of the SMS and be accessible for routine administration of the SMS as well as internal and external audits purposes.

*Cross-reference documents*

## **14. Management of change**

Describe the organisation's process for managing changes that may have an impact on safety risks and how such processes are integrated with the SMS.

(a) Procedures to ensure that substantial organisational or operational changes take into consideration any impact which they may have on existing safety risks.

(b) Procedures to ensure that appropriate safety assessment is performed prior to introduction of new equipment or processes which have safety risk implications.

(c) Procedures for review of existing safety assessments whenever there are changes to the associated process or equipment.

*Cross-reference documents.*

*Company SOP relating to management of change, etc.*

### **15. Emergency/contingency response plan**

Describe the organisation's intentions regarding, and commitment and their corresponding recovery controls. Outline the roles and responsibilities of key personnel. The Emergency Response Plan can be a separate document or it can be part of the SMS manual.

*Criteria (as applicable to the organisation)*

(a) The organisation has an emergency plan that outlines the roles and responsibilities in the event of a major incident, crisis or accident.

(b) There is a notification process that includes an emergency call list and an internal mobilization process.

(c) The organisation has arrangements with other agencies for aid and the provision of emergency services as applicable.

(d) The organisation has procedures for emergency mode operations where applicable.

(e) There is a procedure for overseeing the welfare of all affected individuals and for notifying next of kin.

(f) The organisation has established procedures for handling the media and insurance-related issues.

(g) There are defined accident investigation responsibilities within the organisation.

(h) The requirement for preservation of evidence, securing the affected area, and mandatory/ governmental reporting is clearly stated.

(i) There is emergency preparedness and response training for affected personnel.

(j) A disabled aircraft or equipment evacuation plan has been developed by the organisation in consultation with aircraft/equipment owners, aerodrome operators or other agencies as applicable.

(k) A procedure exists for recording activities during an emergency response.

*Cross-reference documents.*

ERP manual, etc.

**APPENDIX 9: SAFETY RISK REGISTER FORM**

|                                                                         |             |             |            |
|-------------------------------------------------------------------------|-------------|-------------|------------|
| Operation / System                                                      |             |             |            |
| Hazard No.                                                              |             |             |            |
| Hazard Description                                                      |             |             |            |
| Safety Events<br>(Causes or Threats)                                    |             |             |            |

## APPENDIX 10: ROOT CAUSE ANALYSIS (RCA)

### 1. Introduction

Principles of RCA are closely related to those of risk assessment, particularly in terms of the thoroughness of the analysis. Both processes consider not simply the person involved in an issue, but all aspects of the organisation and each individual in that organisation where that person works. This approach has the premise that human error is a consequence rather than a deliberate action and, as such, proactive measures and continuous reform of different aspects of the processes and organization can address latent conditions in the system and increase the system's resistance to operational hazards. The term "latent conditions" refers to flawed procedures or organizational characteristics capable of creating hazards if the right conditions or actions occur.

Therefore, RCA treats errors as defects in the system rather than in an individual. RCA looks beyond the symptom to find the organizational defect that permitted an error to occur. The more thorough the analysis, the greater the likelihood you will uncover why the system deficiency could occur, and how your organization can respond definitively.

An effective RCA can be as simple as asking and answering a question (five times) about **why** something happened. A superficial analysis might have led to disciplinary action against one individual, which is indicative of a blame culture, and would, most likely, lead to a recurrence of the same error by a different individual.

### 2. Considerations for the RCA process

(a) RCA should consider two major areas:

1) Systems analysis plays an increasingly important role because of the increasing aviation complexity and variety of organisation activities, equipment and multicultural environment issues. Systems analysis emphasizes a harmonized approach to an enterprise, including specific written procedures and planning for all activities, clearly established authority and responsibilities, communications processes, and methods of measuring results, detecting system errors, and preventing recurrence. This harmonized approach recognizes the wide range of interrelated issues that are potentially associated with a problem in the system.

2) Human factors analysis begins with the field organization itself where the occurrence happens (flight operations, ground operations, training, maintenance, ATS, etc. Each of those organisations

- i. Defines the environment where staff conducts their tasks.
- ii. Defines the policies and procedures that staff must follow and respect.

iii. Allocates the resources that staff needs to achieve the safety and production goals.

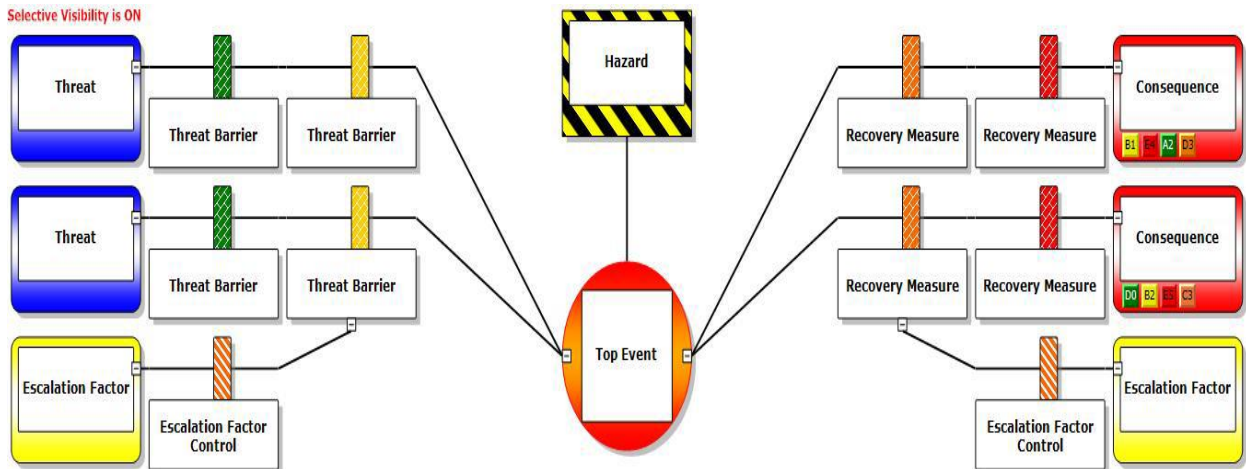

(b) Within the field organisation, human factors analysis looks at how their staffs communicate and perform in the work environment and then seeks to incorporate that knowledge into the design of equipment, processes, and organisations. This enhances safety and maximizes the human contribution, partly by designing systems to anticipate the inevitability of human error. The human factors discipline addresses a wider range of issues affecting how people interface with technology and the operational system; how people learn about new or changed equipment, technology, and documentation; and how people adapt to the general workplace environment.

(c) Any organisation should be aware that knowledge gained from human factors can help to avoid operational staff errors, ensure that individuals' initial skill sets match task requirements, ensure that individuals maintain and improve their skills, and enhance the work environment.

The BCAA expects that any RCA consider a human factors is part of the investigation of individual events by any personnel designated to respond to safety related occurrences. Otherwise, data reviewed in a quality assurance process could be incomplete.

(d) A proper implementation of RCA, need a s environment, which should discourage the temptation to quick fixes by blaming operational and looking for corrective actions on unrealistic and unachievable human performance.

## APPENDIX 11: EXAMPLE OF BOWTIE MODEL

### Definitions related to the BowTie Model:

**Threats** A possible direct cause that will potentially release a hazard by producing a top event.

**Consequences** A potential event resulting from the release of a Hazard, which directly results in loss or damage.

**Top Event** A point in time which describes the release or loss of control over a Hazard (the undesired system state).

**Hazard:** The condition, object or activity with the potential of causing injuries to personnel, damage to equipment or structures, loss of material or reduction of ability to perform a prescribed function.

**Escalation Factors:** A condition that leads to increased risk by defeating or reducing the effectiveness of controls (a control decay mechanism).

**Escalation Factor Control:** A control that manages the conditions which reduce the effectiveness of other controls

**Threat Barrier:** Measures that are considered to reduce the likelihood of the top event to occur.

**Recovery Measure:** Measures that are considered to reduce the likelihood of the top event developing into a consequence as well as mitigating the severity of the consequence.
